Base your answers to the questions below on the diagram of the human female reproductive system represented below. Numbers 1 through 6 label structures in the female.

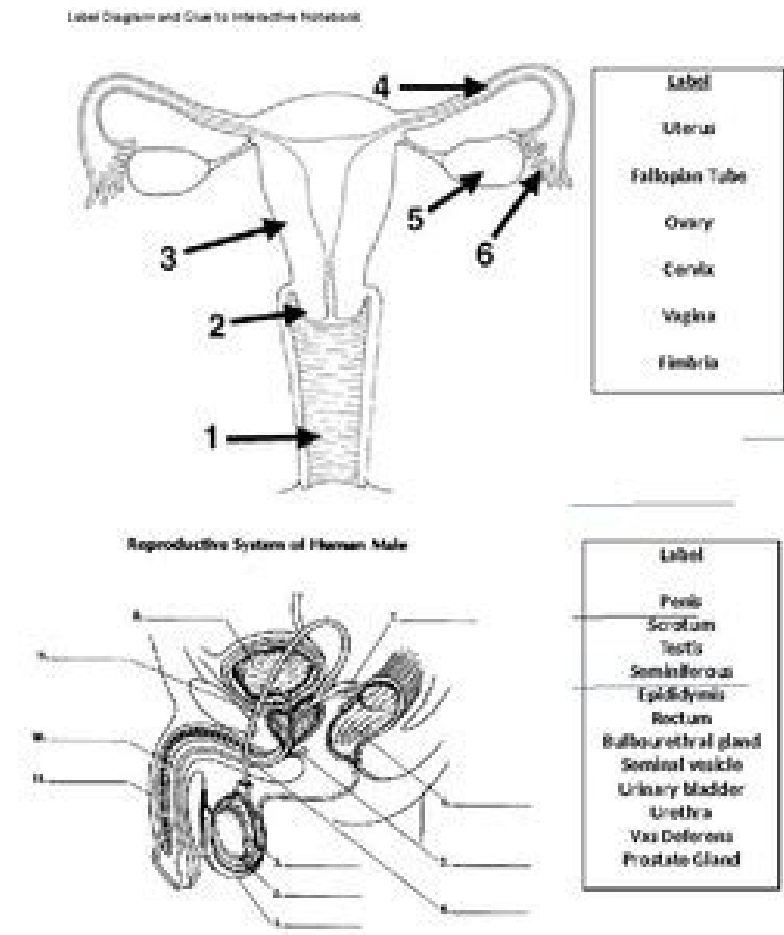

7. Identify the name of each numbered structure.
- 1) _____ 4) _____
2) _____ 5) _____
3) _____ 6) _____
8. In which structure would the male gametes normally be deposited? _____
9. In which structure would the male gamete and female gamete normally unite? _____
10. In which structure does the fetus usually develop? _____
11. Which structure is also known as the birth canal? _____
12. Which structure produces hormones that influence secondary sex characteristics during puberty?
What are the names of these two hormones? _____

13. State two examples of secondary sex characteristics in females. _____

14. Which structures are not apart of the female reproductive system? _____

MALE REPRODUCTIVE ORGANS

5.1

PUBERTY AND REPRODUCTION

Name: _____

Male and female reproductive system diagram worksheet. Male reproductive system diagram in hindi. Explain in detail male reproductive system.

Penis, which usually locks the soft, becomes hard when a man is sexually excited. All boys are born with practice, a fur fold at the end of the penis covering the glans. Ovrio 7. Ovum develops in the 7.Theestrogene secreted by follicular squid 1. Stimulating hormone 1. The hormone used in some pregnancy tests. "Timo to use as a teaching transparency or as a leaflet for student reference! Includes the following academic vocabulary: Singter, Scrotty, Epidade, Seminal Vesimics, Vagina, Overs, Testicles, Cowboy Glan, Uretra, Cervix, VAS Deferent, Folhapiana Tubes, Penis and Prostra Glan € nd.Health includes Male and female reproductive system diagrams illustrating the structures above. You can also see a 2student fpage you love to learn about the human body with this grouped feature! This package has everything for these six human body systems: circulatory system system - muscle system of muscle system in respiratory system respiratory system for each body system, there are several informative articles, related practical activities, vocabulary posters Rio, graphic organizers, Cloze passages, understanding questions, biography case studies, vocabulary activities and flipbooks! Save 30% buying the 3st bundpage will love to learn about the respiratory system with this resource package! This unit has everything! Includes informational articles, practical activities, vocabulary posters, organizers, task cards, PowerPoint, understanding issues and a 5 page flip book - this is all about our bones! What is inside: "Respiratory system activity pack (PDF) PowerPoint Respiratory System - Respiratory system task cards "save 30% by purchasing the package! Students will love to learn about SYSTEAFABE Respiratory The 4th Learn about the muscle system with this resource package! This unit has everything! Includes informative articles, practical, practical activities, Posters, organizers, task cards, PowerPoint, understanding questions, and a book of 5 pages - this is all about our bones! What is inside: "" Muscle System Activity Package (PDF) - Muscular System Muscle System "" Task Cartons Save 30% Buying the Package! Muscle System Activities Package (PDF): Students will love learning ABO reproduction is the process by which organisms make more organisms like themselves. Uterus 1. 1.1. f oxytocin of the posterior pituitary glansy is the horman that stimulates the milk "deca" 6. At the end of the glans is a small slit or opening, which is where Simen and pee leave of the body through the urethra. The interior of the penis is made of a spongy tissue that can expand and hire. Collaborators and attributions Ruth Lawson (Otago Politan; Dunedin, New Zealand) 4. When the Sperm Aduba (knows) an egg, this fertilized ovule is called Zygote (pronounced: Zye-Caat). The faces also have a growth outbreak during puberty while reaching their adult height and weight. The mixture of fetal and maternal blood in the placenta allows easy nutrient transfer and oxygen to the fetus. D. next to the test machines are the epidimal and the deferential vas, which transport spermatozodes. Luteinising Hormone Secreted by Glania Previous Pituitary 2. Ripe Horizon 5.Corporus Luteum develops 3.Progesterone secreted by corpus luteum 10 The diagrams below show different stages in the ovarian cycle. The re-embrane and the nervous system donate the scrotum the suggestion to change in size. During puberty, testosterone and other horms make these skills become spermatozoides, between fetal and maternal blood systems. Description of the term F. à € à € ofThe horman that is secreted by Corpus Luteum F. A cell of cells produced by the early division of the fertilized egg. F colostrum contained antibodies, but not Each time an ejacula guy, it can contain up to 500 million spermatozoides. Epididymis in which mature sperm and and Motor. Implantation 7. Where the ovules are produced 8. It is not medically necessary, but parents who chose to have their circumcised children are often based on religious believers, concerns about the hygiene, or cultural or social motives. I) chose different colors and color: a) the cells that produce estrogen. Description of the Demal Structure. Seminal vesicles and the prostate make a whitish fluid called seminal fluid, which mixes with sperm to form a sermen when a male is sexually stimulated. When the puberty begins, usually between the ages of 9 and 15, the à € "located near the brain - secret hormones that stimulate the tests to produce testosterone. Male genitals include: test machines (pronounced: Tess-Tih-Kulz) The duct system, which is composed of the epidometer and the vaspHERE the glamands accessories, which include seminal vesicles and prostate the penis on a guy who has reached sexual maturity, the two oval test machines or the test machines (pronounced: tess-teez) make and store millions of small spermatozodes. The genes that parents pass are what makes their children similar to others in their family, but also what makes each child Be only white. Green 3. Brown B) The enzyme containing bag that helps the penetration of the egg sperm. How does the male reproductive system work? The testicles also are part of the endobric system because they make horms, including Testosterone (pronounced: Tess-Toss-Tuh-Rone) . It also stimulates the production of spermatozoides. The urethra (pronounced: Yoo-Ree-Thruh) is the channel that carries the sperm (in fluid called SÀmen) to the outer of the body through the penis. But even if the reproductive system is essential to maintaining a living spy, unlike other bodily systems, it is not essential to keep a living individual. "Rgans that contribute 90% of the SÀmen. If the Simen is ejaculated in a woman's vagina, Millions of "Nothing" of the vagina through the lap of the To find the egg in the bankruptcy. Filopian tube 3. G. estrogen stimulates milk "led". b) What is the difference between infertility and impotence? This lesson includes 17 additional questions for subscribers. Blue I) In the space provided, name the event shown as "Event A" in the diagram. Blastocyst 4. Adrenaline can not easily cross the placenta. The scrotum changes the size to maintain the right temperature. When the body is cold, the scrotum shrinks and is tighter to hold the heat of the body. Testosterone is horman that causes boys to develop deeper voices, larger music and facial body and hair. a) Organize the following events in the ovarian cycle in the correct order in which they occur. A sphiver muscle between the Otther and Vagina B. Antibodies can not pass through the placenta of the mother. Brown 5. This happens without a guy having to think about it. Now, show by arrows added to the diagram, where FSH horms (stimulating folk horman), LH (horman luteinising), estrogen and progesterone or are produced. These notes compare and contrast the differences between male and female reproductive systems. Uretra 4. The hair begins to grow in the pubic area and then on the face and on the armpits. Channel that receives the penis during the cells C. Duct through which the ovule travels to reach the oleTer. Put the numbers in the correct order in the boxes below. II. In the human reproductive process, two types of sexual cells or gametes (pronounced: Gah-Meetz) are involved. B. Placenta 6. What is the conception? Penis 1. 2. Zygote divides again and again when it grows in the figure's catering, maturing along the pregnancy in a embryo, a fetus and finally a newborn baby. Morula 3. A. 7 Tubules where spermatozoids are stored. Fallopiian Tube 4. Red 4. What is the male reproductive system? 9. The male gamete, or spermatozoboid, and the feminine, the egg or ovum, are in Furmea's reproductive system. Where spermatozules are produced C. antibodies of the mother cross the placenta for the fetus. The tube that carries both sperm and urine by the penis. a) The area containing DNA. Genatic material of the men's and feminine combination so that a new individual can be created. The diagram below shows a section through a test circle. Fertilized egg annex to uterine coating E. Testosterone production brings many physical changes. 4. The tissues in the penis fill with blood and becomes struggled and erect (an erection). Embryo transfer is possible at this stage. The membranes that form around the embryo to allow the diffusion of nutrients and oxygen, etc. Blue 5. Cerviol 5. Cathles are divided and change until they have a short head and tail, like tadpoles. Color and label the following areas. It takes only one sperm to fertilize the egg. Add labels to the diagram of the female reproductive system below. a) What is the difference between sperm and semen? This skin bag helps regulate the temperature of the test machines, which need to be kept cooler than the body temperature to produce spermatozoides. The male has reproductive, or genitals, which are in and off the Ivis. Glansy accessories 5. VAS Deferences or sperm duct. In the spaces under the diagrams, write a few words describing what is happening in the diagram above. Deferens (Sperm Duct) 3. The diagram below shows an ovary with the stains of development of the ovule during an ovarian cycle. Colostrum contains many horms. Then the penis becomes longer and the seminal vesicles and the protest grows. I. Young animals often need to receive iron supplements because milk contained very little iron. Vulva 6. 6. The hormone secreted by the ovarian fascination. Circion is usually made during the first days of a baby's life. Vagina 2. Collecting where sperm is stored. Color and label the diagram structures. diagram. This is sermen delivery for the female reproductive tract E. The axis is the main part of the penis and glans is the tip (sometimes called head). F. Description of the term D. H. Although fetal and maternal blood flow near each other, they do not mix in a healthy placenta. C. At birth, these tubules contain simple round squid. External genitics A. The male reproductive system: makes SÀmen (pronounced: see-mun) releases SÀmen in the reproductive system of the female during sexual relationship produces sexual horms, which help a boy develop in a Sexually mature man during puberty when a baby is born, he has all parts of his reproductive system in place, but it is not even puberty that he is able to reproduce. The sperm develops in the test machines within a small tube system called seminum tubules. Colostrum 10. Fibrous coat around and protecting the test machines. Yellow 4. 3. Some boys are circumcised, which means that a member or clergy cuts the practice. When it's hot, it gets bigger and the floppier gets rid of the extra heat. The diagram below shows a spermatozoboid. I. The horman that changes the empty fascium for the Corpus Luteum. Accessory glands, including seminal vesicles and the prostate, provide fluids that lubricate the ducts system and nourishes spermatozoboid. If false writing in the correct answer. The urethra also is part of the urinary system because it is also the channel through which the pee passes when it leaves the bladder and leaves the body. Spermatozodes are the gametes that carry the genetic material (head, pine and tail) while the samen is the fluid produced by the glands accessories, in addition to the spermatozoboid performed in it. Blue 2. Add the riots to the diagram of the reproductive system of a male dog shown below. T 12. This fertilized egg is now called zigoto and contain 46 chromosomes - half the egg and half of the Stimulating hormone follicle (FSH) secreted by the Pituitary Glania 6. These genes come from the male spermatozoboid and the figure egg. Yellow c) The pine - contain mitocÀndrias for energy for the sperm movement. J. Zygoto goes through a process of becoming an embryo and developing in a fetus. 2. Indicate whether the following assignments are true or false. Yellow C) all ovules. The male reproductive system and the female reproductive system are required for reproduction. When the erect pony is stimulated, the muscles around the reproductive tools are contracted and forces the semen through the ducts and urethra. The head contains genetic material (genes). Estrogen 9. 1. Habial Fertilization Place C. 1. A male who reached puberty will produce millions of sperms every day. F. 5. Epididymis 6. Each spermatozoboid is extremely small: only 1/600 of an inch (0.05 millimeters in length). Fill in the following table with the words from the list below. Humans, like other organisms, pass some characteristics for the next generation. Although the time of these changes be different for each face, puberty stages generally follow a defined sequence: during the first stage of male puberty, scrotum and test machines grow larger. The sperm then moves to the deferential vas (pronounced: vs def-uh-runz), or duct, spermatozoboid. Seminum tubules in which sperm is done. We do this through our genes, the special carriers of human traces. The sperm moves to the epidimal, where they complete their development. The guys who have circumcised points and those who are not different: all the penis work and feel the same, regardless of whether the practice has been removed. Fill in the table using the options in the list below. Progesterone 2. CoriÀnica gonadotrophin 8. During this time, the voice also deepens. Hormone of Luteinising 5. Testosterone is a important of puberty in guys. What do spermatozoides do? Infertility is the inability to conceive and have descendants while impotence is to mate. The epidimal (pronounced: EP-UH-DID-UH-Miss) and the testers hang in a structure similar to a pocket off the pelvet called scrotum. The first milk. The penis is really made of two parts: the shaft and glans. Red b) the structure that produces progesterone. Some words may need to be used more than once. The hollow ball of cells produced by the subsequent division of the fertilized egg. When a guy makes the way for puberty, his tests produce more and more of it. The tube loading spermatozoboid from the epidimal to the urethra. Seminums 2. The stiffness of the erect pony makes it easier to insert into the figure's vagina during sex. Horman stimulating the growth of ovarian folks. Insert the correct term into the table. CÀ € Mara Holds the Development Fetus E. Red D) The tail à € "Boosts the sperm along the female tract. The Simen is pushed out of the male's body through his urethra - that process is called ejaculation. Ejaculation.
